

SIMUCUBE

Simucube Tahko GT-21

By customer demand, we present to you the Simucube Tahko GT-21 Wireless Wheel. The need for this product surfaced from the requests, conditions, and feedback from racers venturing into the world of high-end sim racing. Tahko GT-21 introduces the new Simucube button feature enabling force feedback parameter adjustment while racing.

Tahko means grindstone in Finnish: robust, functional, and historical foundation for something new. Tahko GT-21 is an excellent standard GT steering wheel that is designed to endure real racing needs.

The first model in the Simucube steering wheel family offers features for Racers of all levels, from beginners to professional Racers. To ensure the quality of an ultimate experience for years to come, gloves are recommended while racing.

We chose to use only the finest materials and the design choices for the feeling that provides nothing short of rock-solid immersion: no flex, no compromises, only Simucube quality.

Features include:

Simucube Quality

- Perfect compatibility with Simucube 2
- Precision milled aluminum
- Long battery life
- Industrial grade robustness and functional design
- Simucube SQR Included

Simucube button

- The Simucube button is our new way to change the most common force feedback parameters straight from the wheel
- Parameter adjustments can be made while driving
- Simucube button is a unifying feature in all coming Simucube steering wheels, as well as in Simucube Wireless Wheel 2 modules

The right amount of features

- Two digital paddles
- 7-way switch (4 directions, rotary encoder, middle button)
- Ten high-quality industrial-grade buttons
- Rotary encoder
- Wireless technology utilizing Simucube Wireless Wheel System

Attention to detail

- We tested the market offering and chose the best properties for our product to achieve a thoroughly immersive paddle shifter for all-around racing needs
- 320mm rim with Alcantara finish
- The placing of the buttons was designed and tested by professional drivers and engineers
- Optimized inertia; just the right mass for optimal FFB feel
